Main results obtained in domestic and foreign markets		<p>Domestic: Our company has a record of participating in the second and third stages of the field demonstration experiment of the "Crisis Management Water Level Gauges", an innovative river technology project of the Ministry of Land, Infrastructure, Transport and Tourism of Japan. We have also introduced camera-equipped crisis management water level gauges at 500 locations nationwide.</p> <p>Overseas: Since 2012, we have installed equipment in approximately 250 locations in Vietnam, Thailand, Indonesia, Myanmar and Djibouti. Some are still in operation in collaboration with stakeholders in each country.</p>	
Product s and technolo gies	Name	①SESAME II-02q	
		②SESAME CAMERA	
	Features		
			
			
Reference Price	To be decided upon negotiations		

①SESAME II-02q

In Japan, we have a record of continuous 10-year use in solar cells, batteries, and mobile phone lines. The product is compatible with various sensors (confirmation required). Rain gauges and patrol lamps can also be installed. You can also view the image linked with the water level data through the camera (optional). With SESAME WEB (optional), you can check on-site data from anywhere in the world via the Internet.

②SESAME CAMERA

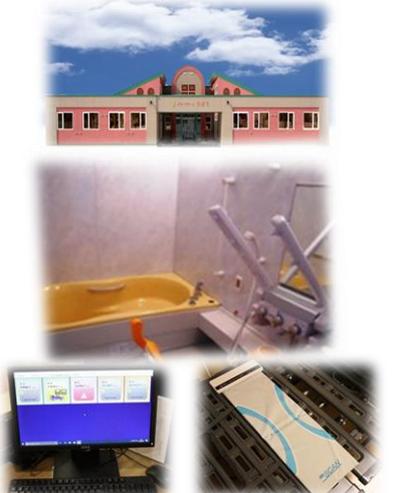

It is a system that takes pictures at regular time intervals and transmits them using a mobile phone line. You can check the images you need anytime, anywhere on your office or home PC, smartphone, or tablet. With the solar panel combined with battery, it can be easily installed and installed even in places where there is no power supply equipment. You can easily add up to 3 units with a USB connection.

③SESAME WEB

The data transmitted to the cloud server by the SESAME series can be viewed and remotely managed by a PC or smartphone connected to the Internet. Flexible analysis of points, periods, time intervals, measurement items, etc. is also possible.

Industry		Founded in 1941, this is the only academy of its in the Ihuri Hidaka area, Hokkaido. It comprises a specialized school for certified care workers, social welfare officers, nursery teachers, kindergarten teachers, a specialized school for cooks, and also two kindergartens that also serve as training facilities.	
Main results obtained in domestic and foreign markets		Domestic: Acceptance of Taiwanese nursing university students as short-term study abroad trainees at the "Hokkaido Welfare Education College, Vocational Practice Special Course, Department of Care and Welfare" established by this Academy. Overseas: Establishment of an academic cooperation with the nursing university "Foyin University" in Kaohsiung, Taiwan. The company is developing human resources to spread Japanese "long-term care" as "KAIGO" overseas. From Japan, we dispatch teachers and students (short-term study abroad trainees).	
Products and technologies	Name	① Nursing staff training	
	Features		<p>① Nursing staff training</p> <p>The company carries out human resource development education that can provide long-term care as a user-oriented "service" that requires long-term care. The company teaches a systematic educational curriculum so that users can use nursing care technology based on scientific knowledge in the best condition. (Development of human resources who can provide physical care to service users, support for families, and cooperation with medical institutions.) Two-year training course. (It will take 3 years to graduate if you include the period of enrollment in the Japanese language education course before enrollment.) In addition, after consultation, it is possible to practically learn specialized skills and knowledge such as "long-term care technology" and "long-term care service provision theory" in a short period (several weeks to 2 to 3 months). (A contestant may not be able to come to school due to the circumstances of obtaining a Japanese status of residence.) This "short-term training course" is basically a course at our school in Japan, but it is also possible to dispatch faculty and staff to China to conduct classes such as various courses.</p>

Products and technologies	Name	① Strong disinfectant deodorant water Alpha Zero	
		② Ozone-generating device (O3 PREMIUM)	
			<p>① Strong disinfectant deodorant water Alpha Zero</p> <p>Weakly acidic hypochlorous acid water is obtained by making sodium hypochlorite water weakly acidic. "Alpha Zero" is produced by the "buffer method" that maximizes only the sterilizing ability of hypochlorous acid.</p> <p>It is also used for disinfecting and cleaning foods, and its safety is recognized by the Ministry of Health, Labor and Welfare of Japan.</p> <ul style="list-style-type: none"> Weakly acidic hypochlorous acid water has a broad sterilization spectrum similar to that of glutaral and sodium hypochlorite, and decomposes resistant bacteria and viruses, toxins produced by the bacteria (such as Staphylococcus aureus), norovirus, and O157. It is also effective against Salmonella. "Alpha Zero" draws out the power of hypochlorous acid more purely by the buffering method. Due to the impurity removal manufacturing method, it has both the original sterilizing power and deodorizing power of hypochlorous acid.
Features		<p>② Ozone-generating device (O3 PREMIUM)</p> <p>Plasma ozone decomposes viruses and molds and sterilizes the air.</p> <p>In Japan, the product has been adopted by more than 500 ambulances, and is widely installed in various commercial facilities such as hotels, station terminals, kindergartens, nursery schools, school facilities, hospitals, elderly health facilities, pet shops, beauty salons, beauty salons, railroad vehicles, buses and houses.</p>

Main results obtained in domestic and foreign markets		<p>Our company's main product, Sweets Skin Care Shukure, is a sugar scrub that has been introduced to Hokuren and Aeon Body and has been a favorite for many years.</p> <p>A usage test was conducted in the NICU using a sugar ring massage. Our company has evidence from more than 2000 people.</p> <p>Health skin care products are donated to evacuation centers, hospitals and long-term care facilities in the event of a disaster. Our company received the Hokkaido Welfare Town Development Award. After a use test at a dialysis clinic, our company made a presentation at the dialysis society. Taking this opportunity, the number of introductions to dispensing pharmacies has increased, and it is also useful for self-care of dialysis patients.</p>	
Products and technologies	Name	① Sweets skin care Shukure	
		② Sugar ring massage / sugar ring bath	
		③ Cleansing and moisturizing lotion	
	Features	① Sweets skin care Shukure	 <p>A sugar scrub from Japan that is 100% food-derived natural ingredients. It is an easy care that you just apply it to your wet skin after washing your face and wash it off quickly. Sugar balances the moisture and sebum of the skin, moisturizes it firmly and softens the skin. The product can be used daily on the face and whole body. The main ingredient is sugar beet from Hokkaido, which is the only non-genetically modified sugar beet in the world. Traceability is also clear. Not only sensitive skin, but also oily skin, dry skin, any skin are refreshed and moisturized. Massage & pack (0.25 mm with fine sugar grains) for sensitive skin and face. Face & Body is an economical price for a large volume (sugar grain rough: 0.5 mm).</p>
 <p>Sugar ring massage</p> <p>A type of sugar scrub that can be used by newborns and does not burden the skin. Each grain of sugar beet is coated with edible vegetable oil. Since it is a 100% natural ingredient, there is no problem even if it gets in your mouth. A skin care item that quickly cleanses and moisturizes. The product has been tested for use on more than 2000 infants in the NICU (Infant Intensive Care Unit) at the prefectural hospital. Announced effectiveness at domestic and overseas academic societies such as the East Asian Nursing Society.</p> <p>Sugar ring bath</p> <p>A 100% natural bathing agent. It can be used with an excellent moisturizing power of sugar, so long baths can be used to moisturize sensitive skin of babies in a short time. When you no longer use a baby bath, you can use it as a bath salt for the whole family. The product is always ranked high in Kokuyo Crankin on many Baby sites on the WEB. Please search the product by keywords Ablution, Organic or Natural.</p>			
③ Cleansing and moisturizing lotion		 <p>Thoroughly cleans without water and protects the skin with moisturizing and coating ingredients. The same weak acidity as the skin. You can also sterilize 99.9% by simply spraying it on your skin, letting it blend in, and wiping it off quickly. The product is recommended as a cleaning agent for normal skin care, when it is difficult to take a bath due to poor physical condition or hospitalization, and as a hygiene stockpile in the event of a disaster. It is also used in medical and long-term care settings, as well as on fragile skin of the elderly and thin skin of babies without burden.</p> <p>The product contains corona active ingredient (announced by the Ministry of Economy, Trade and Industry of Japan) and can be used not only on fingers but also on the face and whole body. It is also popular as a self-care item for those who need dialysis.</p>

Products and technologies	Name	Brown Rice Enzyme High Genki Spirulina	
	Features	   <p>1. What is Brown Rice Enzyme High Genki? Even though we know that brown rice diet is good for our health, it is not always easy to continue. That's why the brown rice enzyme Hi Genki was created as an "easy brown rice diet. Hi Genki is a food made by fermenting brown rice, germ, and epidermis with koji mold. It contains more than 40 kinds of nutrients necessary for good health, and even if you eat white rice, supplementing with brown rice enzyme gives you more value than eating brown rice. No need to cook, just eat it with water.</p> <p>2. Recommended for the following people. Those who are concerned about the health of their intestines. It contains four times as much dietary fiber as burdock. 60% of the respondents experienced the benefits of dietary fiber (according to a survey of 250 monitors). It is a product that you can easily experience the benefits within a few days of eating it. A paper has also been published proving that brown rice enzymes increase short chain fatty acids, which are useful for health. https://shop.genmaikoso.co.jp/mimiyori/detail.aspx?id=100</p> <p>(2) For those who have an imbalance in nutrition or lack vegetables: It contains more than 40 nutrients including vitamins and minerals. Even if your nutritional balance is disturbed by eating out or traveling, you can easily supplement vitamins and minerals with brown rice enzymes. https://shop.genmaikoso.co.jp/about/guide.aspx</p> <p>3) For those who are concerned about indigestion When eaten after a meal, the digestive enzymes produced by fermentation help digest the food you have eaten. This video shows a visual experiment to see how digestive enzymes work. https://www.youtube.com/watch?v=R2pHH3YIfIQ</p>	
	Features	  <p>For those who are concerned about sugar and fat Many papers have shown that a brown rice diet is effective in improving the health of people with high sugar and fat levels. The function of dietary fiber and gamma oryzanol, which are abundantly contained in brown rice, is expected to be effective. If you eat brown rice enzymes before meals, your stomach will swell up and prevent you from overeating.</p> <p>5) For those who are concerned about beauty and want to reduce aging Brown rice enzymes contain many ingredients that suppress "oxidation," which is the cause of aging. It also contains ergothioneine, a hot ingredient that is also used in cosmetics.</p> <p>6) For those who are interested in fasting Even if you only use brown rice enzymes and water instead of meals, you don't have to worry about hunger, and you can reduce your calorie intake while still taking vitamins and minerals. It is popular for its ease of fasting. For more information, please visit https://shop.genmaikoso.co.jp/mimiyori/fasting.aspx</p> <p>3. We have published more than 30 papers on the functions of the 3. Research data is explained on the page "Fuburabo". https://fbra.jp/</p> <p>4. Our products are produced in our own factory in Hokkaido, and we have acquired ISO9001 and Hokkaido HACCP certification. Thorough production and hygiene management is carried out. We also test for pesticide residues and radioactivity, and do not use raw materials that do not meet our standards.</p>	
Reference price	Domestic: Sales price at our directly managed store site: 4800 yen (tax not included)

Industry		Development and manufacture of assistive suits	
Main results obtained in domestic and foreign markets		Our company is a certified university-launched venture company established with Professor Takayuki Tanaka of Hokkaido University's Graduate School of Information Science and Technology as a partner. Our main product, Smart Suit®, was developed with competitive funding from NEDO (New Energy and Industrial Technology Development Organization). The functions and effects of the product have been verified by a third-party organization under a project of the Ministry of Health, Labor and Welfare. The products are sold through the stores and online stores of DCM, with whom we have concluded a business and capital alliance. Smart Suit Plus has also been adopted as uniforms by many companies including Taisei Corporation.	
Products and technologies	Name	Smart Suit® Light	
		Smart Suit® Plus pants/overalls	
		Physical fitness measurement + provision of physical fitness promotion program(name undecided)	
	Features		Smart Suit® Light An endoskeleton-type assist suit (patented) with an ergonomic design that assists in maintaining a painful mid-back posture and assisting the upper body when bending down to lift heavy objects, without the use of mechanical power, and at the same time tightens the abdomen to stabilize the trunk, thereby preventing back pain and preventing falls. The effect is to prevent back pain and other illnesses by reducing the burden and fatigue on the body so that manual labor can be performed continuously, safely and comfortably. (2) [Training] Based on the concept of "Light Work", the moderate training effect obtained through continuous work contributes to the maintenance and improvement of physical strength (muscular strength, endurance, and energy) and increases the work motivation of the worker.
		Smart Suit® Plus pants Smart Suit® Plus overalls Smart Suit® Light is set in a uniform (pants and overalls), which is easy to put on and take off, and has improved comfort. Since there is no outward sign of wear, it can be introduced only to those who need it. In addition to the basic functions of the light, it can also assist in standing up from a crouched position by supporting the knees. The product is available off-the-shelf and can also be incorporated into existing uniforms.	
		With regard to "training," one of the concepts of light labor, we provide a system that visualizes physical fitness through simple physical fitness measurement and presents a labor sustainability index. The system will help maintain and improve overall physical fitness through personalized training programs proposed by AI based on the results of physical fitness measurements. As more and more older workers are actively hired, the risk of industrial accidents increases due to the decline in physical fitness caused by aging, but this system can contribute to the prevention of industrial accidents and occupational safety by making workers aware of their own physical fitness and providing them with work that is appropriate for their physical strength.	
Reference Price	Smart Suit® Plus	¥28,000 (inclusive of tax: ¥30,800)	
	Smart Suit® Plus pants	¥36,000 (inclusive of tax: ¥39,600)	
	Smart Suit® Plus overalls	¥38,000 (inclusive of tax: ¥41,800)

Industry		Information services (software development, sales, maintenance, consumables)	
Main results obtained in domestic and foreign markets		Field tests were conducted at five domestic facilities and two overseas (Singapore) facilities. Afterwards, access to nursing homes was restricted due to the corona vortex. Our company is developing a new version to solve the issues of the field test (suppressing unnecessary notifications, improving accuracy, etc.). Our company monitors installations and conducts demonstration tests while monitoring the corona vortex situation.	
Products and technologies	Name	AI nursing care monitoring "smartNexus®care"	
	Features		<p>A service with peace of mind brought about by privacy-conscious surveillance cameras!</p> <p>A privacy-conscious nursing care record system that records skeletal coordinates from cameras using AI posture estimation (no video is recorded).</p> <p>Our company has developed a completely new and unique solution for creating nursing care records, monitoring, and crime prevention based on skeletal coordinates.</p> <p>Visualizing the living situation and making it accessible to all concerned will bring a great sense of security to the patient and family.</p> <p>Our company also believes it is important for corporate compliance. In addition to reducing staff shortages in nursing homes, this system can also contribute to corporate compliance (harassment and bullying of the elderly and disabled, moral harassment, power harassment, and sexual harassment).</p> <p>International application: PCT/JP2020/000636</p>
			<p>Visualize the room at the time of danger notification, can determine the degree of urgency!</p> <p>Danger notification is notified by mosaic image.</p> <p>The danger notification is notified by a mosaic image. Since it is possible to check the approximate situation in the room, it is possible to provide high quality care services while protecting privacy.</p> <p>Maintaining independent walking is important for extending healthy life expectancy, and if a person suffers a serious injury such as a "fall accident," it becomes difficult for them to walk independently, and there are a great number of elderly people who transition from disuse syndrome to dementia.</p> <p>The photo shows an actual case of detection and notification of a fall accident in a field test.</p> 
			<p>Reduces the anxiety of night patrols!</p> <p>Nighttime patrols unnecessarily wake up patients...</p> <p>This is a solution to the problems of nursing homes.</p> <p>The thermal imaging camera gently watches over the patients even at night.</p> <p>It is said that there is a shortage of staff at night, and it is a heavy mental burden to have to patrol alone. Nighttime surveillance with a camera is very effective. In addition, real-time monitoring can reduce the risk of accidents such as falls.</p> <p>By reducing the physical and mental burden on the staff, we hope that it will help with employment issues.</p>
Reference Price	Installation cost approx. 600,000 yen (5 cameras, 1 edge computer, 1 POE hub) Cable and installation costs not included Monthly fee: 55,000 yen (5 cameras) minimum configuration.

Industry		Software development and sales□	
Main results obtained in domestic and foreign markets		Japan: ・SaaS deployment of the interactive communication system "Kizuna Web" (mainly for medical facilities) ・Sales of the video recording system "OperaVision" (mainly to operating rooms of public university hospitals) Overseas: ・Execution of demonstrations of the interactive communication system "Kizuna Web" (China, Vietnam, etc.)"□	
Products and technologies	Name	Two-way communication system "Kizuna Web" Cloud version service (SaaS) F2f KizunaVision telemedicine system	
	Features	Information sharing conference at three medical facilities 	Conferences can be held at up to three sites simultaneously. For example, a conference can be held between a patient's family doctor's clinic, a core hospital in a secondary care area, and a tertiary care hospital such as a university hospital, sharing the same images and other information on the same screen. Furthermore, still and moving images can be filed along with the patient's data, so that the patient's symptoms can be saved as still and moving images over a long period of time. Based on this progress information, conferences with specialists can be held. (Video and still image filing function)
			Interactive conferences can be held with smooth video and audio at 30 frames per second (the same speed as TV broadcasting). Not only video images such as surgical images, but also angiographic fluoroscopic images and echo (US) images can be transmitted and received. Still and moving images of transmitted images can be recorded.
		Annotation (override) function and finger point 	It comes with an annotation function that allows you to overwrite text and lines on the still image or video displayed on the screen. Four colors are supported: red, blue, yellow, and black. Finger pointing allows you to freely move a "finger-shaped" pointer on the screen with a mouse or pen to point to an objective.

Industry		Information services, food and liquor sales, export and import sales	
Main results obtained in domestic and foreign markets		Development and provision of order placement, logistics support, and payment platforms for food retailers, wholesalers, and manufacturers; system development and off-shoring for local businesses in Vietnam; local import and sales; and operation of "Fresh Hokkaido," a specialty store in Hokkaido, Japan.□	
Products and technologies	Name	CloudEDI	
		GINES	
		Fresh Hokkaido	
	Features		CLOUDEDI supports data exchange with next-generation protocols such as EDI for small and medium-sized companies and financial EDI, in addition to the various EDI protocols that Japanese companies have been using for a long time, such as distribution BMS, Zengin TCP, and JCA procedures. Furthermore, the system supports data exchange using next-generation protocols such as EDI for small and medium-sized enterprises and EDI for financial institutions. The system has obtained various certifications and accreditations from the Ministry of Economy, Trade and Industry, the Financial Services Agency, and the Small and Medium Enterprise Agency, and is currently being rapidly adopted by companies promoting digital transformation.
			GINES is a platform specialized in the distribution of food gifts, and realizes the matching and selection of companies and products, as well as the centralized management of detailed information on them in the cloud. Until now, the solicitation and selection of companies and products for gift-giving and exhibitions have been done using Excel and e-mail, with complicated work and briefing sessions for the people involved, but by doing this in the cloud, the work can be done non-face-to-face, non-contact, and remotely.
		Fresh Hokkaido has a store in Ho Chi Minh City that imports and sells Japanese and Hokkaido products. The store is positioned as a specialty store and antenna store for Japanese products, starting with Hokkaido, and has the function of a local showcase and pop-up shop, enabling it to conduct marketing research and business matching with local companies and consumers on a regular basis.	
Reference Price	Cloud EDI and Gines use a fee-based model, so they are either free of charge or cost a few thousand yen per month. As for Fresh Hokkaido, the product registration and sales will cost about 50,000 yen for 2 product items.
